

NEW!

Expansion of MPM Additives: AD16300, AD17300 & AD18300

MPM introduces three new additives to its range. These engine oil additives provide effective solutions for oil leaks, excessive oil consumption, and contamination caused by internal engine deposits. They are suitable for both petrol and diesel engines, with or without turbochargers.

AD16300 MPM Engine Oil Stop Leak restores worn engine seals and reduces oil consumption. It revitalizes hardened seals, improves sealing performance and effectively stops oil leaks.

AD17300 MPM Engine Stop Smoke is formulated to combat excessive oil consumption and smoke formation. It also improves compression and overall engine performance, and contains no harmful solvents or solid particles.

AD18300 MPM Hydraulic Valve Lifter Treatment frees stuck and ticking hydraulic valve lifters while cleaning the oil system. This results in quieter, smoother engine operation and restored performance.
